SUBJECT- SCIENCE

CHAPTER  
1

## Animals and Their Eating Habits

**Learn about!**

- Types of animals
- Food chain
- Eating habits of animals
- Eating habits of some other animals
- Care of domestic animals

You must have seen different types of animals like dogs, cats, mice, goats, cows, birds and insects in your surroundings. They eat different types of food. But why do animals need food? Food gives them energy for their daily activities. It also helps them to grow and stay healthy. Most of the animals spend a lot of time in search of food because food is not always easily available to them in sufficient quantity.

**Types of Animals**  
Some animals eat plants while some eat other animals. Depending on their food habits, animals can be divided into four groups — herbivores, carnivores, omnivores and scavengers.

**Herbivores**  
Animals that eat only plants are called plant-eating animals or herbivores. Their flat and broad teeth help them to cut and chew plants.
